Cointab Software Private Limited

Software Developer

Job Description:
You would be building a web based software which helps some of the largest companies in India to reconcile their financial data and prepare MIS, reports, etc.

As part of the Software Engineering team, your work will include:
- Creation of front-end and back-end of the software using Node.js and AngularJS web framework
- Creation/Consumption of APIs
- Creation/Maintaining of MySQL databases
- Building user-friendly UX and UI
- Building automated testing scripts
- Managing Git repositories
- Deployment and maintenance of codebase across a large server farm
- Optimizing the code for stability and performance

We are using Node.js as our programming language so you should be open to learning and adopting it to build our software.

Desired Candidate Profile
You should have a good understanding of the programming concepts and excellent logical thought process. You should also have the ability to understand difficult business problems and build useful solutions.

Prior experience should include building websites and softwares (client-side and server-side logic creation) in Node.js programming language, APIs and databases.

Education
